Individual Contribution Report

Ali Ayhan Günder

Student ID: 2021400219

Group Number: 6

1. Personal Information

- **Name:** Ali Ayhan Günder

- **Student ID:** 2021400219

- **Group Number:** 6

2. Tasks & Contributions

My teammate and I collaborated on all queries in the assignment. I wrote *initial drafts* of each SQL statement, while my partner *reviewed and refined* wrote them to guarantee the correctness. Whenever a query produced an unexpected result, we traced the logic, revised the code, and re-tested until the output matched the specification. Complex problems occasionally required several iterations, but this workflow ensured that every query was fully validated.

3. Collaboration & Challenges

Coordinating real-time work sessions was difficult because our lecture schedules, other homework and part-time jobs rarely aligned. To overcome this, we scheduled short Google Meet meetings whenever we were both available. The extended project deadline also gave us the flexibility to refine our work without compromising quality. We collaborated in real time on Google Docs, writing SQL code and comments, while talking during our Google Meet sessions.

4. Self-Assessment

Taking ownership of the first drafts deepened my understanding of the syntax of SQL, set operations, and optimization strategies. Feedback from my partner helped correct misunderstandings

and sharpen my attention to detail. In general, I am confident that I:

- contributed substantial original code,

- actively participated in debugging and validation, and

- strengthened my SQL skills and appreciation for collaborative development.

In conclusion. I am proud of the final product and believe that our partnership produced queries that are correct and well documented.
