

Recruiter Guide: My Projects Portfolio

Ali Ayhan Günder

March 19, 2026

This document is a quick tour of the repository and where to find the most relevant work.

Repository root: `My-Projects/`

Contents

1 Fast path (2–5 minutes)	1

2.1 Main folders and what they contain	2
3 How to review quickly (what to look for)	2
3.1 Code-first projects	2
3.2 Report-first projects	3
4 Optional: running the highlight project (GENFIT)	3
5 Contact	3

1 Fast path (2–5 minutes)

If you only have a short amount of time, start with:

1. **GENFIT (team full-stack SWE project)**: a fitness-themed platform built with documented setup.
Folder: `GENFIT_SWE_PROJECT_CMPE451_FINAL_VERSION/`
Start here: `.../bounswe2025group2-main/bounswe2025group2-main/README.md`
2. **Operating Systems (C / performance)**: systems programming projects.
Folder: `OPERATING_SYSTEM_PROJECTS/`
3. **Statistics / analytics (Python)**: data analysis scripts and reports.
Folder: `STATISTICS_PROJECTS/`

2 How this repo is organized

Projects are grouped mostly by course or topic. The top-level `README.md` acts as a clickable index.

2.1 Main folders and what they contain

- **Software engineering (team)**
 - `GENFIT_SWE_PROJECT_CMPE451_FINAL_VERSION/`: final iteration.
 - `GENFIT_SWE_PROJECT_V1_CMPE352/`: earlier iteration.
- **Systems & low-level**
 - `OPERATING_SYSTEM_PROJECTS/`: C projects; some are best built/run on Linux/WSL.
 - `COMPUTER_ORGANIZATION_LABS/`: course labs.
 - `LOWLEVELLANGUAGE_PROJECTS_C,C++,ASSEMBLY/`: C/C++/assembly exercises.
- **Algorithms & data structures**
 - `ANALYSIS_OF_ALGORITHMS_PROJECTS/`
 - `DATA_STRUCTURES&ALGORITHMS/`
- **Data**
 - `DBMS_SQL_PROJECTS/`: SQL-focused projects.
 - `STATISTICS_PROJECTS/`: Python analytics + report assets.
- **Languages / coursework**
 - `JAVA_OOP_CMPE160/`
 - `PYTHON_PROJECTS_CMPE150/`
 - `CMPE 260-PROLOG/`
- **HCI / UI**
 - `HUMAN_COMPUTER_INTERACTION_PROJECTS/`: homework folders + slides/pdfs.
- **Entrepreneurship / business**
 - `Entrepreneurship_PROJECT&STARTUP/`: decks, reports, and supporting documents.

3 How to review quickly (what to look for)

3.1 Code-first projects

- Look for a project-level `README` with setup steps.
- For C/C++ projects, check for a `Makefile` and a `src/` folder.
- For Python projects, check for `requirements.txt` and runnable scripts (e.g., `task1.py`).

3.2 Report-first projects

- Some folders include PDFs (reports/specs). Opening the PDF first can be the fastest way to understand the goal and results.

4 Optional: running the highlight project (GENFIT)

The GENFIT repository contains detailed Docker instructions in its own README. In general terms, the flow is:

1. Install Docker + Docker Compose.
2. Follow the `docker-compose` commands in the project README.
